LANDESK® IT Asset Management Suite

Gain a complete view of all IT assets from point of purchase through retirement. LANDESK® IT Asset Management (ITAM) Suite is a comprehensive system of software compliance, software license management, inventory, asset lifecycle management, and reclamation. Know what assets you have, where they are, how they're used, and how they're performing for better decisions at any stage of each asset's lifecycle.

Reclaim Operational Expense and Survive Audits

License true-ups are a thing of the past. Now it's possible to maintain software license compliance for audits while curbing overspending on software applications. LANDESK ITAM Suite lets you share timely information with auditors that calculates the effective software license and identifies who is using what software and under what licensing agreement it's covered. The Suite also provides better visibility into software and asset lifecycles, licensing, and ownership. You can reclaim unused software licenses automatically, reducing costs and risks.

Create Lifecycle Processes Around Your IT Assets

Expand beyond software reclamation to track and maintain all assets across your environment. Import and track warranty information automatically at the time hardware is purchased. Automate hardware recalls for assets like batteries, printer ink or toner, and other consumables. This boosts efficiency and centralizes control through automated responses to requests or events.

Gain Complete Visibility of All IT Assets with B2B Connectors

LANDESK ITAM Suite employs business-to-business connectors uniquely to aggregate manufacturer, vendor, and reseller data, providing you all related information from the moment you acquire a new asset. In addition, automatic processes improve efficiencies and reveal more usable data on demand, which takes months to gather otherwise.

Utilize Powerful Discovery and Inventory Processes

From the moment you purchase a hardware asset through its entire lifecycle, LANDESK ITAM Suite enables you to make better decisions at any lifecycle stage. The Suite publishes analytical data and management reports to tablets, smartphones, or any device with an Internet browser. Executives and IT management teams gain a complete picture of which assets are in use and whether or not the organization is compliant. Correct information delivered at the right time drives confidence in the data and accurate decisions.
